Derived from Humic acid.

C-CAT is a natural chelating compound that is derived from Humic Acid. It has both Fulvic and Humic Acid.

DIRECTIONS FOR USE:

Mix in the recommended amount of C-CAT with 5-10 gallons of water per acre. Apply to either the soil or through foliar spraying.

RECOMMENDED RATES:

Use 2 to 4 quarts per acre per application for most all row crops. For special applications you should consult your C-CAT distributor.
